DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Horiuchi (U.S. Patent No. 6,367,833).

Regarding claims 1, and 21-22, Horiuchi discloses an automatic shifting control device for a bicycle with features of the claimed invention that facilitates the operation of a bicycle that is subjected to force or stress from a stress inducing member consists of means to operate the bicycle transmission by a preset of gear control. The device has various sensing units operating in a predetermined time that control the operation of the components (see claim 1). Clearly the shift in the speed, or gear is associated with stress or torque reduction (see, col. 7, line 59).

Regarding claims 2-3, the operation is on a bicycle transmission shift device.

Regarding claims 4, 8, the gear arrangements and the various computer controlled steps provide general motion assistance.

Regarding claims 5, 9, the device senses various speed conditions (see, for example, claim 3).

Regarding claims 6-7, the sensing unit is a torque sensor (see claim 20).

Regarding claim 10, the various speeds and the crank torque is indicative of its speed.

Regarding claims 1-14, the component is the bicycle-shifting device and its related automatic conditioning.

Regarding claims 15-19, the conditioning and gear shifting is performed by comparison with threshold values (see, for example table 4, and col. 11 lines 1-25).

Regarding claim 20, the device has a power source (element 77).

Response to Amendment

3. Applicant's amendment and arguments filed 11/21/05 have been fully considered but they are not persuasive. It is submitted that upon the change in the speed or change of a gear, the applied torque or the related stress will suddenly reduce, in fact it appears that the reason for such automatic change is to reduce the stress for the various components so they perform in a less hostile environment.

4. THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for response to this final action is set to expire THREE MONTHS from the date of this action. In the event a first response is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event will the statutory period for response expire later than SIX MONTHS from the date of this final action.
